SKILLS

Languages:	Python, JavaScript, TypeScript, Bash, SQL
Frameworks & Libraries:	Node.js, ExpressJS, FastAPI, ReactJS, Next.js, Redux, Zustand, Flask, Selenium
Databases & Infra:	MongoDB, PostgreSQL, Firebase, Redis, Pinecone, Celery Queue, Socket.io, gRPC
Tools & DevOps:	Docker, Git, Linux, AWS, Azure, GCP, Jest, Loki, Grafana
AI & Systems:	GenAI Applications, RAG Pipelines, Agentic Workflows, MCP Servers, DSA

EXPERIENCE

Founding Backend Engineer July 2024 – Present
[Pipeline](#), [TechStack](#) Remote, India

- Architected and shipped the backend from zero to production as founding engineer – 9 containerized Python/FastAPI services, 500+ endpoints, MongoDB – now powering outbound pipelines for 100+ B2B customers.
- Built LLM agentic pipelines (GPT/Gemini) that enrich, score, and route leads end-to-end across HubSpot, Salesforce, and HeyReach, lifting lead data accuracy 30% and cutting manual list prep from hours to minutes.
- Designed the async execution layer – Celery/Redis queues, ZooKeeper distributed locks, and a custom worker autoscaler – sustaining 500+ concurrent jobs at 80% higher throughput with zero duplicate outreach.
- Instrumented the platform with Grafana dashboards and structured logging, cutting incident triage from hours to minutes across a 9-service fleet.

Full-Stack Developer Intern Apr 2024 – July 2024
Reverr Remote, India

- Built AI-powered workforce agents using TypeScript and OpenAI/GenAI with WhatsApp (Meta API) integration; implemented Pinecone for contextual vector search over the database.

Software Development Engineer Intern May 2024 – July 2024
Devobase Remote, India

- Built subscription and customer management platform for [Zeirman Trading](#). Migrated a 650+ users database.
- Integrated Stripe, TradingView API, Discord bot, and used Jest and SuperTest for tests, cutting manual tasks by 70%.

PROJECTS

ChordPulse ([open source](#)) AI music co-pilot with zero LLM API calls: provide a song title, YouTube URL, or audio recording and get accurate chord progressions via audio signal processing and chord detection algorithms.

Repo Auditor Login with GitHub and surface your repo's backend blind spots before your users do: static analysis pipeline combined with LLM judgment to detect security gaps, architecture smells, and missing test coverage.

Bookmark CE Sole founding backend engineer (contract): FastAPI backend with async PostgreSQL and Redis/RQ workers, hybrid semantic retrieval (dense + BM25 + RRF) in Pinecone, saga-driven Razorpay billing, and Dockerized GCP Cloud Run deployment via GitHub Actions.

Amistly Founding engineer contract: AI-powered content generation and distribution platform for founders with multi-tenant voice-learning (pgvector for style diff-learning), two-stage hook-vs-voice generation, and API-first posting across LinkedIn, X, and Reddit.

In-House Redis Open-sourced a [Redis CLI in TypeScript](#) with Pub/Sub messaging, RDBMS persistence, stream processing, replication (REPLCONF, PSYNC), and transactional support.

MINI PROJECTS

[LMS gamified with AI](#), [Student Assistance Bot \(Rajasthan Govt.\)](#), [Browser Session Manager](#), [NodeNuker: Dev-Ex Tool](#), [DevBar](#), [Email Scheduling Service](#)

EDUCATION

Bachelor of Technology, Pandit Deendayal Energy University 2021 – 2025

AWARDS & CERTIFICATIONS

- Winner** at the IDE Bootcamp 2024 organized by AICTE and Ministry of Education, Govt. of India.
- Startup incubated at [PDEU IIC](#) for funding.
- Finalist at [SIH](#) (Smart India Hackathon, Top 5 of 44,000 teams), [SSIP](#), Dotslash 6.0 and Tic-Tech-Toe.
